

## Text anti-aliasing

The Character panel in Illustrator provides the following text anti-aliasing options:

- None
- Sharp
- Crisp
- Strong

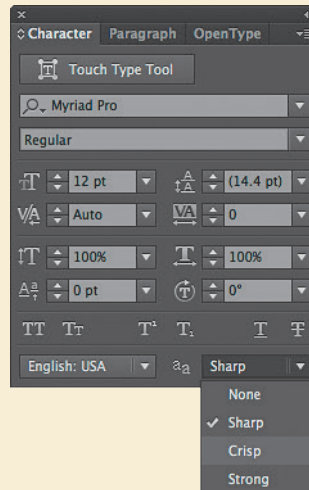

You can set anti-aliasing options for each text frame. These text anti-aliasing attributes get saved as part of the document.

While exporting to web formats like JPEG and GIF using the File > Save For Web command, the following options are available in the anti-aliasing drop-down list:

- None
- Art Optimized
- Type Optimized.

Art Optimized option produces raster for each of these formats in the same way as in earlier versions. However, text anti-aliasing options are not honored while rasterizing the artwork in this case.

Type Optimized option honors the newly introduced anti-aliasing options for the text frames in the raster produced.
